}
main
```

1.2 Day of Date

```cpp
// 0-based
const vector<int> T = {
  0, 3, 2, 5, 0, 3,
  5, 1, 4, 6, 2, 4
}

int day(int d, int m, int y) {
  y -= (m < 3);
  return (y + y / 4 - y / 100 + y / 400 + T[m - 1] + d) % 7;
}
```

1.3 Number of Days since 1-1-1

```cpp
int rdn(int d, int m, int y) {
  if(m < 3)
    --y, m += 12;
  return 365 * y + y / 4 - y / 100 + y / 400
         + (153 * m - 457) / 5 + d - 306;
}
```

1.4 Enumerate Subsets of a Bitmask

```cpp
int x = 0;
do {
  // do stuff with the bitmask here
  x = (x + 1 + ~m) & m;
} while(x != 0);
```

1.5 Fast IO

```cpp
int read() {
  char c;
  do {
    c = getchar_unlocked();
  } while(c < 33);
  int res = 0;
  int mul = 1;
  if(c == '-') {
    mul = -1;
    c = getchar_unlocked();
  }
  while('0' <= c && c <= '9') {
    res = res * 10 + c - '0';
    c = getchar_unlocked();
  }
  return res * mul;
}

void write(int x) {
  static char wbuf[10];
  if(x < 0) {
    putchar_unlocked('-');
    x = -x;
  }
  int idx = 0;
  while(x) {
    wbuf[idx++] = x % 10;
    x /= 10;
  }
  if(idx == 0)
    putchar_unlocked('0');
  for(int i = idx - 1; i >= 0; --i)
    putchar_unlocked(wbuf[i] + '0');
}

void write(const char* s) {
  while(*s) {
    putchar_unlocked(*s);
    ++s;
  }
}
```

1.6 Int to Roman

```cpp
const string R[] = {
  "M", "CM", "D", "CD", "C", "XC", "L",
  "XL", "X", "IX", "V", "IV", "I"
};

const int N[] = {
```

```cpp
  1000, 900, 500, 400, 100, 90,
  50, 40, 10, 9, 5, 4, 1
};

string to_roman(int x) {
  if(x == 0) {
    return "O";  // Not decimal 0!
  }
  string res = "";
  for(int i = 0; i < 13; ++i)
    while(x >= N[i])
      x -= N[i], res += R[i];
  return res;
}
```

1.7 Josephus Problem

```cpp
ll josephus(ll n, ll k) { // O(k log n)
  if(n == 1)
    return 0;
  if(k == 1)
    return n - 1;
  if(k > n)
    return (josephus(n - 1, k) + k) % n;
  ll cnt = n / k;
  ll res = josephus(n - cnt, k);
  res -= n % k;
  if(res < 0)
    res += n;
  else
    res += res / (k - 1);
  return res;
}

int josephus(int n, int k) { // O(n)
  int res = 0;
  for(int i = 1; i <= n; ++i)
    res = (res + k) % i;
  return res + 1;
}
```

1.8 Random Primes

```
36671 74101 724729 825827 924997 1500005681 2010408371 2010405347
```

1.9 RNG

```cpp
// RNG - rand_int(min, max), inclusive

mt19937_64 rng(chrono::steady_clock::now().time_since_epoch().count());

template<class T>
T rand_int(T mn, T mx) {
  return uniform_int_distribution<T>(mn, mx)(rng);
}
```

2 Data Structures

2.1 2D Segment Tree

```cpp
struct Segtree2D {
  struct Segtree {
    struct node {
      int l, r, val;
      node* lc, *rc;
      node(int _l, int _r, int _val = INF) : l(_l), r(_r), val(_val),
```

```cpp
      lc(NULL), rc(NULL) {}
  };
  typedef node* pnode;

  pnode root;

TABLE OF CONTENT
0. Basic Rule
    0.1. Everything is in double
    0.2. Every comparison use EPS
    0.3. Every degree in rad
1. General Double Operation
    1.1. const double EPS=1E-9
    1.2. const double PI=acos(-1.0)
    1.3. const double INFD=1E9
    1.3. between_d(double x,double l,double r)
        check whether x is between l and r inclusive with EPS
    1.4. same_d(double x,double y)
        check whether x=y with EPS
    1.5. dabs(double x)
        absolute value of x
2. Point
    2.1. struct point
        2.1.1. double x,y
            cartesian coordinate of the point
        2.1.2. point()
            default constructor
        2.1.3. point(double _x,double _y)
            constructor, set the point to (_x,_y)
        2.1.4. bool operator< (point other)
            regular pair<double,double> operator < with EPS
        2.1.5. bool operator== (point other)
            regular pair<double,double> operator == with EPS
    2.2. hypot(point P)
        length of hypotenuse of point P to (0,0)
    2.3. e_dist(point P1,point P2)
        euclidean distance from P1 to P2
    2.4. m_dist(point P1,point P2)
        manhattan distance from P1 to P2
    2.5. point rotate(point P,point O,double angle)
        rotate point P from the origin O by angle ccw
3. Vector
    3.1. struct vec
        3.1.1. double x,y
            x and y magnitude of the vector
        3.1.2. vec()
            default constructor
        3.1.3. vec(double _x,double _y)
            constructor, set the vector to (_x,_y)
        3.1.4. vec(point A,point B)
            constructor, set the vector to vector AB (A->B)

```

5.6   Flows with Demands

```
let S0 be the source and T0 be the original sink
1. add 2 additional nodes, call them S1 and T1
2. connect S0 to nodes normally
3. connect nodes to T0 normally
4. for each edge(U, V), cap = original cap - demand
5. for each node N :
   1. add an edge(S1, N), cap = sum of inward demand to N
   2. add an edge(N, T1), cap = sum of outward demand from N
6. add an edge(T0, S0), cap = INF
7. the above is not a typo!
8. run max flow normally
9. for each edge(S1, V) and (U, T1), check if flow == cap
```

```
if step #9 fails, then it is not possible to satisfy the given demand
```

Mathematically, let $d(e)$ be the demand of edge e. Let V be the set of every vertex in the graph.

- $c'(S_1, v) = \sum_{u \in V} d(u, v)$ for each edge (s', v).

- $c'(v, T_1) = \sum_{v \in V} d(v, w)$ for each edge (v, t').

- $c'(u, v) = c(u, v) - d(u, v)$ for each edge (u, v) in the old network.

- $c'(T_0, S_0) = \infty$
